

Special Session on

Fractional Order Renewable Energy Systems and Applications

Fractional order models, in fact, appear to be more accurate in reproducing the behavior of Physical processes than classical integer order models. In recent years, fractional order computing has been applied in several fields: physics, chemistry, robotics, automatic control and rheology. To discover the new research of this type of calculation in the field of renewable energies, which are very important nowadays, a special session on ***Fractional Order Renewable Energy Systems and Applications*** has been proposed. This special session aims to provide a platform for researchers in fractional order theory and applications in renewable energy systems to exchange results and advanced technology.

Topics of this special session include (non-exhaustive) to:

- Fractional order system identification and control in renewable energy systems,
- Estimation methods for fractional order renewable energy systems,
- Development of a fractional order controllers (FOPID, FOSMC, FOFC, ...) for fractional order models of renewable energy,
- Fractional-order control method for MPPT systems,
- Numerical Simulations for fractional order models of renewable energy ,
- Modeling of fractional order renewable energy systems.

Organized by:

Dr. **Abdelghani DJEDDI**, Larbi Tebessi University- Tebessa, Email: abdelghani.djeddi@gmail.com

Dr. **Abdelhamid Djari**, Larbi Tebessi University – Tebessa , Email: hamiddjari@gmail.com

Dr. **Amieur Toufik**, Larbi Tebessi University- Tebessa, Email: amieur.to@gmail.com

Important Dates:

Submission Deadline: December 31, 2022

Authors Notification: January 31, 2022

Final Paper submission: February 10, 2022

Papers for the special session should be submitted as PDF attachment via :

Web: <https://easychair.org/conferences/?conf=icsresa22>

Papers should be prepared following the template format of the conference.
